The Congress will combine four International Conferences regularly hosted in Tomsk:

- 20th International Symposium on High-Current Electronics
- 14th International Conference on Modification of Materials with Particle Beams and Plasma Flows
- 18th International Conference on Radiation Physics and Chemistry of Condensed Matter
- 3rd International Conference on New Materials and High Technologies

It will be a good platform for researchers to discuss a wide range of scientific, engineering, and technical problems in the fields of pulsed power technologies; ion and electron beams; high power microwaves; plasma and particle beam sources; modification of material properties; pulsed power applications in chemistry, biology, and medicine; physical and chemical nonlinear processes excited in inorganic dielectrics by particle and photon beams; physical principles of radiation-related and additive technologies; self-propagating high-temperature synthesis; and combustion waves in heterogeneous systems.

The Congress will also provide a workshop at which leading world scientists can lecture to young scientists on the topics involved. Competition of young scientists presentation of conference papers will be held within the framework of the Congress.

The six-day Congress will bring together specialists from different countries and organizations and will give an excellent opportunity to share their knowledge, present oral reports and posters, and discuss research issues of interest.

The Congress was financially supported by FASO Russia and RFBR grants: 18-02-20100 (SHCE), 18-08-20066(CMM), 18-03-20069 (NMHT), 18-38-10031 (School), 18-02-20097 (RPC).
